AFEEZ LUKMON BAMIDELE

FULL-STACK SOFTWARE ENGINEER | BACKEND & BUSINESS APPLICATIONS

+234 706 818 9611 | afeexco223@yahoo.com | Nigeria | Portfolio | LinkedIn

PROFESSIONAL SUMMARY

Full-Stack Software Engineer and technical lead with 9+ years of experience building custom web applications, database-driven platforms, APIs, SaaS products and operational systems. Independently built 100+ web applications across business management, logistics, customer portals, membership systems and digital products. Strong hands-on experience with PHP, MySQL/MariaDB, JavaScript, Bootstrap, jQuery, REST APIs and Python/Flask. Experienced across requirements analysis, database design, backend/frontend development, integrations and deployment.

TECHNICAL SKILLS

Languages	PHP, JavaScript, Python, SQL, HTML5, CSS3
Backend & APIs	PHP/PDO, REST APIs, JSON, authentication/authorisation, third-party integrations, webhooks
Databases	MySQL, MariaDB, relational database design, SQL queries, data validation, audit logging
Frontend & CMS	Bootstrap, jQuery, AJAX, responsive web development, WordPress, Elementor
Mobile & tools	Flutter integration, Paystack workflows, OpenAI API/AI integrations, Git
Engineering	Role-based access control, debugging, testing, security hardening, performance optimisation

PROFESSIONAL EXPERIENCE

Chief Technology Officer (CTO) | ROUTYY Limited

TravelPayy product and platform engineering | Current

- Lead technical direction for TravelPayy, a peer-to-peer delivery platform connecting senders with verified travellers moving along existing routes.
- Design and build the PHP/PDO, MySQL/MariaDB backend and REST API architecture supporting the Flutter mobile application.
- Develop authentication, traveller verification, routes/bookings, shipment workflows, chat, reviews, notifications, wallet operations and payment integrations.
- Shape escrow-oriented payment flows covering collection, delivery confirmation, transaction statuses and withdrawals; coordinate API/database compatibility and production-readiness checks.

Founder & Full-Stack Developer | Gigtask

Remote | September 2016 – Present

- Build custom web applications, database-backed platforms and marketplace-style products using PHP, MySQL, JavaScript and Python/Flask.
- Develop multi-user portals, administrative dashboards, role-based access, audit tools, payment workflows and third-party integrations.
- Design relational schemas and implement server-side validation, permissions, data processing and operational tools across logistics, construction, emergency-record, staff and membership systems.

Web Developer | customisedbydiamond

United Kingdom | April 2022 – November 2024

- Developed responsive websites using PHP, JavaScript, HTML, CSS and Bootstrap; built/customised WordPress themes and plugins.
- Implemented e-commerce catalogues, carts and checkout flows; debugged and optimised sites for mobile compatibility, browser support and search visibility.

Web Designer & Website Manager | British Urban Film Festival (BUFF)

Covent Garden, London | April 2016 – January 2021

- Maintained the festival website, content and submission portals, and delivered website updates and digital assets to event deadlines.

SELECTED SOFTWARE PROJECTS

Selected examples from a broader body of 100+ web applications.

HIGH ROCKS BOYS CAMP MANAGEMENT SYSTEM

Sole Full-Stack Developer | Brevard, North Carolina, USA | Approx. 2023

Built from scratch as a tailored replacement for an expensive existing camp-management platform, using the previous system as a workflow reference. Delivered administrator, staff and parent access; child/student records; accommodation; camp activities; scheduling; food management; staff administration and reporting. **Stack:** PHP, MySQL, Bootstrap, JavaScript, jQuery. Live portal.

BIOVENT SYSTEMS — BUSINESS PORTAL

Sole Developer | Custom software development

Built the company portal from scratch for a biotechnology business providing bespoke grease-management solutions and commercial kitchen extraction maintenance. Used PHP, MySQL, Bootstrap, jQuery and charting/graphing libraries for data visualisation. Live portal.

REVIEWPULSE — SAAS REVIEW MANAGEMENT

Software product development

SaaS platform for Google Business Profile and review management, with business/location import, review aggregation, AI-assisted replies, multi-location management, team permissions, alerts, automated review requests, analytics and embeddable displays. reviewpulse.io.

TRAVELPAYY — PEER-TO-PEER LOGISTICS

Founder / Technical Lead | ROUTYY Limited

Platform connecting package senders with travellers moving along a route. Engineering includes PHP/MySQL services, REST APIs, Flutter integration, identity verification, shipment workflows, wallet and escrow-oriented payments, delivery confirmation and Paystack integrations. travelpayy.com.

THE MILLION DOLLAR CRYPTOCURRENCY WALL

Web application development

Developed an interactive cryptocurrency-themed advertising platform. Visit website.
